RESOLVE NIFI AUTHORIZATION AND LZO CODEC ERRORS

There are times when NIFI's GetTwitter processor reports an authorization error because of Sandbox's system clock has wrong time. We can confirm if the correct time is displayed on the NIFI dashboard and fix the issue by running following set of commands on Command Line Interface.

```
yum install -y ntp  
service ntpd stop  
ntpdate pool.ntp.org  
service ntpd start
```

If the PutHDFS processor reports an LZOCCodec error, you need to open the HDFS configuration tab in Ambari and delete all references to LZOCCodec. Restarting HDFS and Nifi after making these changes should fix this issue.

Alternatively, you can also provide the path of following JAR file on Additional Information Attribute section of PutHDFS processor. This JAR file is also available on GitHub page.

[hadoop-lzo-0.4.3.jar](#)
